

WooZONE

Quick user manual

[support.aa-team.com](http://support.aa-team.com)

## Step 1 - Upload and Activation

---

Installing the theme is very easy, you'll see.

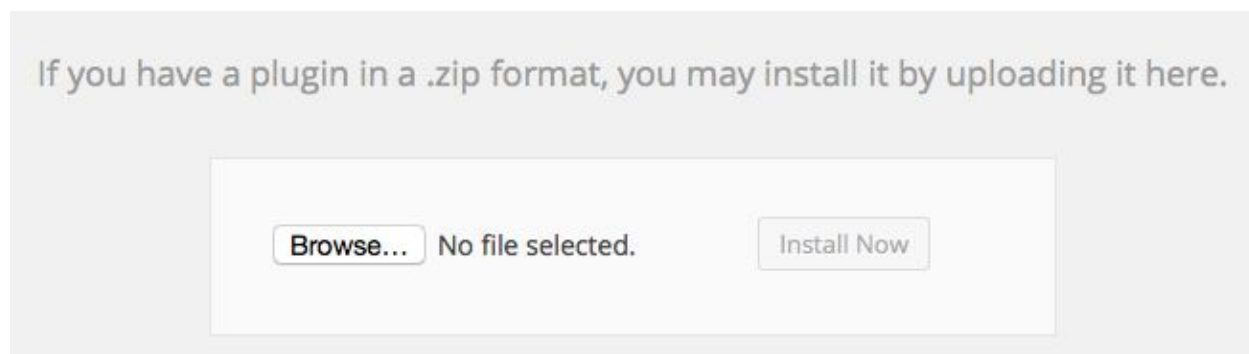

There are two ways to install a WordPress Plugin:

1. Directly upload the zipped theme file via the WordPress admin
2. By uploading the unzipped plugin folder containing all the plugin files directly on your server using an FTP client.

### Option 1 - Using WordPress Installer ( recommended )

Log in to your WP Admin Panel and open the **Plugins** panel

Click '**Add new**' and follow the instructions

When asked to select a file, choose the **woozone.zip** file

After uploading the Plugin to your server, Click '**Activate**'

**Plugin Requirements:**  
WordPress (4.7+), WooCommerce (2.6+)

## Option 2 - Installation via FTP Client Software

---

Extract the .ZIP archive from Codecanyon to a local folder on your PC.

Upload unzipped **woozone** folder to the '/wp-content/plugins/' directory using your favorite FTP client software

Make sure you have setup Transfer Mode - Binary, because files can be broken upon transfer with ASCII mode

Login to your WordPress admin dashboard, go to Plugins

Click '**Activate**'

Continue with the **Online Documentation** for the rest of the setup

---
