# 1. Installing the Theme

You need to upload the theme files to your WordPress installation's wp-content/themes/ folder. Then go to your WordPress administration panel and activate the theme from the **Appearance > Themes** pane.

**DO NOT install it like** wp-content/themes/thevoux-wp/thevoux-wp

**DO install it like** wp-content/themes/thevoux-wp

If you want to install the theme by uploading the zip file, please make sure that you do not upload the zip file downloaded directly from Themeforest. The zip file you downloaded contains extra files such as documentation (one you are reading) and licensing. You should upload the zip file containing the WordPress files only.

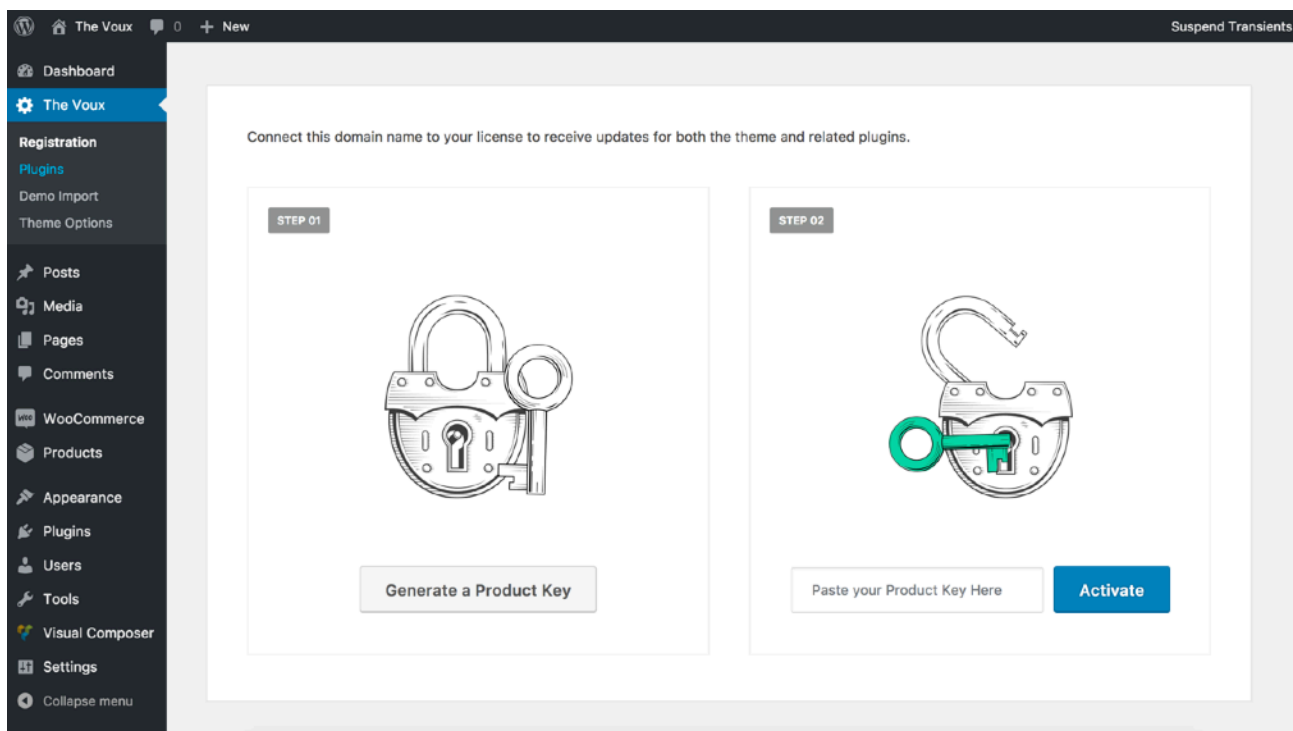

Once the theme is uploaded, you need to activate it. Go to **Appearance > Themes** and enable your chosen theme. Once you have enabled the theme, you need to make sure you have everything necessary to use it properly. To do this, please go to **Appearance > Install Plugins** to install the necessary plugins such as Visual Composer.

## Warning!

While installing your theme through wordpress admin, you may encounter an error message saying “are sure you want to do this?”. This is mainly due to your hosting php settings. The theme zip file is roughly around 6mb and in some hosting providers, the default value for **max\_upload\_limit** left default which is 2mb. To solve this problem you should either increase your maximum upload size (to 10mb) on your hosting admin panel or ask your host to do it for you if you do not have the privilege to alter your server php settings. This is a very common request and they should be able to help you out. Once the limit is increased you can re-try the install and you'll be all good to go.

## 2. Register Your License

With Version 3.0 of Notio theme, we have introduced our in-house license management system. By registering your license, you can get **auto updates** for your theme and the bundled plugins such as Visual Composer.

To do this, you need to login to our License Management system from:

**<https://my.wpthemestudios.com/>**

Once you login, you 'll see your purchases from Fuel Themes. You can now generate your **Product Key** by entering your domain and clicking on Generate Product Key.

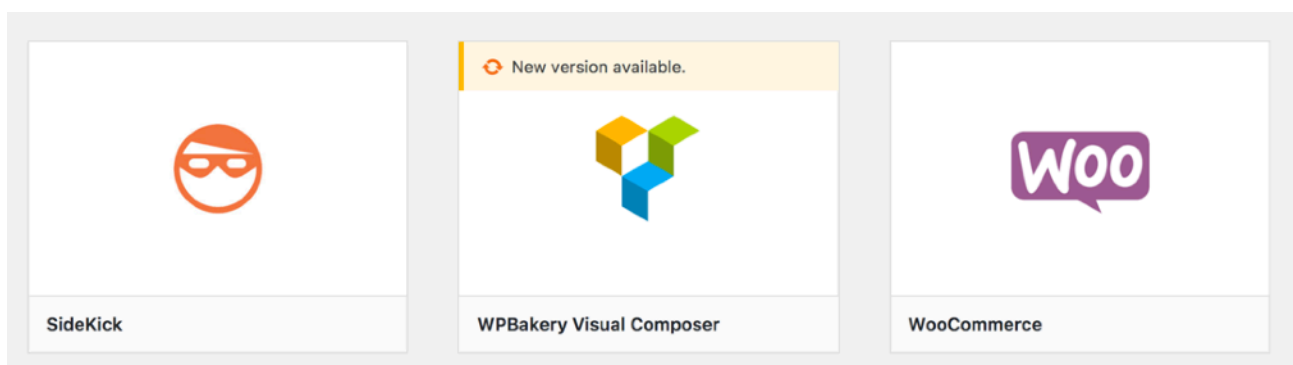

| THEME   | PRODUCT KEY   | SUPPORT                 |
|---|---|-------------------------|
|  | <p>Enter Your Wordpress Site URL:</p> <input type="text"/><br><input type="button" value="Generate Product Key"/> | <p>● Support Active</p> |

You can find your WordPress Site URL from the WP Admin > Settings > General:

|                         |   |
|-------------------------|---|
| Tagline                 | <input type="text" value="Just another WordPress site"/><br><i>In a few words, explain what this site is about.</i>                                 |
| WordPress Address (URL) | <input type="text" value="http://localhost/wordpress-thevoux"/>   |
| Site Address (URL)      | <input type="text" value="http://localhost/wordpress-thevoux"/><br><i>Enter the address here if you <a href="#">want your site home page to</a></i> |

### 3. Install Required Plugins

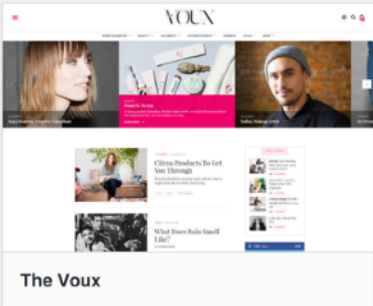

Once you have finished your Product Registration, you can now install and activate the required plugins:

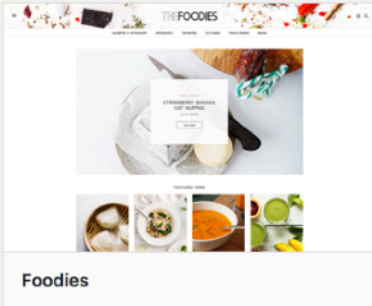

## 4. Importing Demo Content

Demo Content depends highly on your hosting settings, so please make sure that every requirement is met before trying to import the demo content.

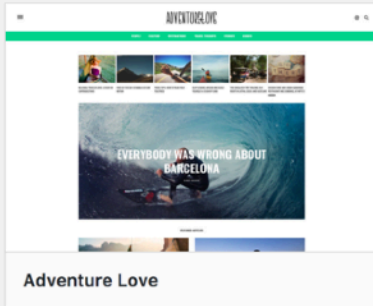

| Requirements         |                                       |
|----------------------|---------------------------------------|
| Server Memory Limit: | ✓ 512M                                |
| PHP Version:         | ✓ 5.6.30-1+wpengine8                  |
| PHP Time Limit:      | ✓ 3600                                |
| Max Upload Size:     | ❗ 1 MB. The recommended value is 12M. |
| fsockopen/cURL:      | ✓                                     |
| GZip:                | ✓                                     |
| Remote Get:          | ✓                                     |

The Voux

Foodies

Adventure Love

Demo Content process might take seconds to several minutes depending on your hosting settings. Please be patient.

## **What if the Import fails or stalls?**

If the import stalls and fails to respond after a few minutes, or it fails with a simple error message like "Import failed," You are suffering from PHP configuration limits that are set too low to complete the process. You should contact your web host and ask them to increase those limits to a minimum as follows:

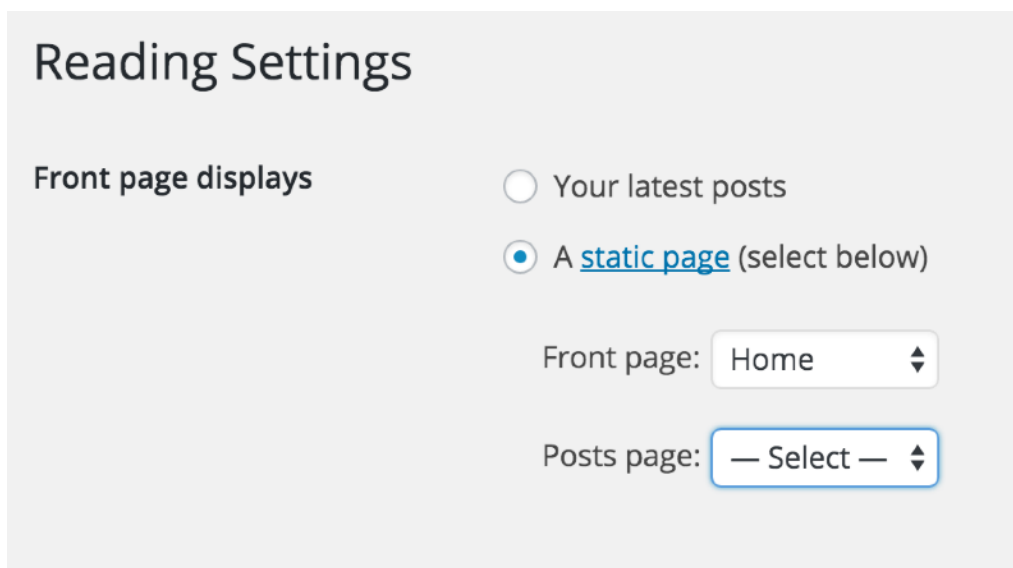

- max\_execution\_time 600
- memory\_limit 128M
- post\_max\_size 32M
- upload\_max\_filesize 32M

You can verify your PHP configuration limits by installing a simple plugin found here: <http://wordpress.org/extend/plugins/wordpress-php-info>. And you can also check your PHP error logs to see the exact error being returned.

## 5. Setting up your front page & blog

To set up your front page, you need to create two pages:

Create a page using the integrated Visual Composer and name it "Home"  
Then go to **Settings -> Reading** and click on "**A static page (select below)**" as shown:

The screenshot shows the 'Reading Settings' panel in WordPress. Under the 'Front page displays' section, the option 'A static page (select below)' is selected with a radio button. Below this, the 'Front page' dropdown menu is set to 'Home', and the 'Posts page' dropdown menu is set to '— Select —'.

Now Create another page and name it "Blog", and then set it as your Posts page.

## 6. Post Formats & Layouts

This theme comes bundled with the following post formats:

- **Standard:** A standard WordPress post. Upload a single image and set it as featured image
- **Gallery:** Upload multiple images inside the gallery metabox.
- **Video:** Paste URL of the video. Supported websites are here: <http://codex.wordpress.org/Embeds>

You'll find additional settings inside the **Post Settings** metabox:

☒ Style 2 (Large Top Image)

Which post style would you like to use?

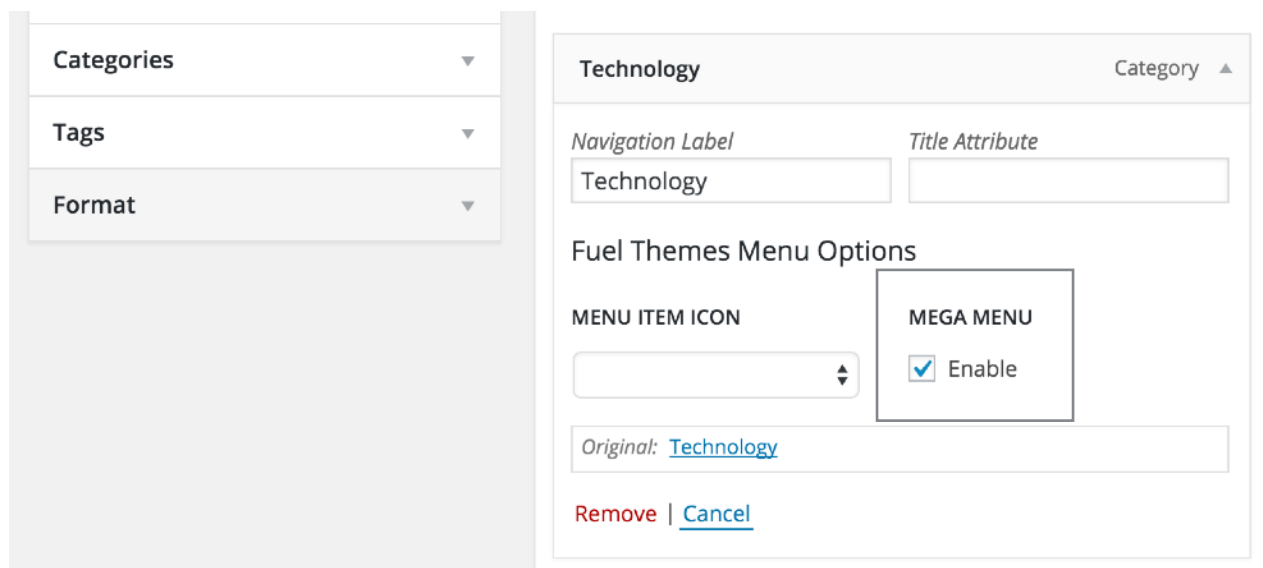

Top Image

The image to display on top.

## 7. Using the Mega Menu

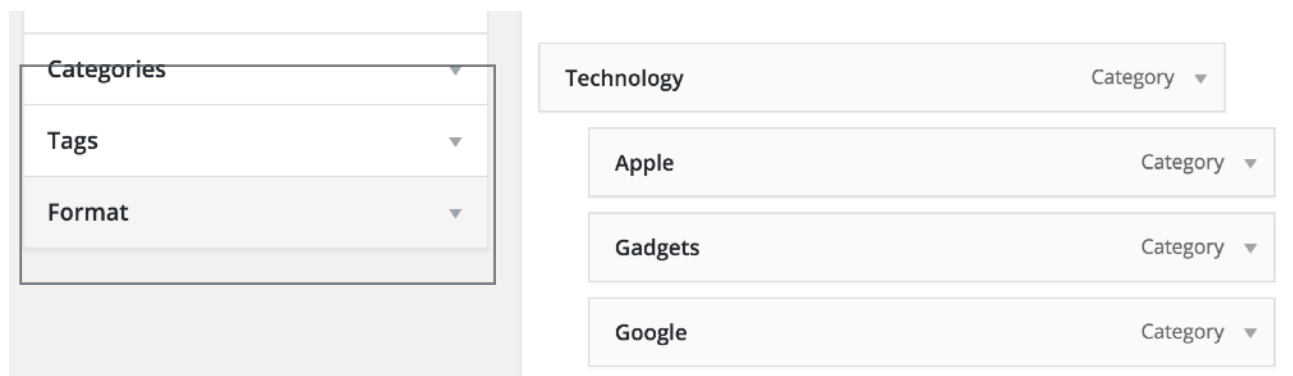

You can easily have mega menus on your main navigation using the Good Life theme.

To do that, you need to check the “**Mega Menu**” checkbox on the first-level menu element:

The screenshot shows the 'Categories' sidebar on the left with 'Categories', 'Tags', and 'Format' options. The main panel displays the settings for the 'Technology' category. Under 'Fuel Themes Menu Options', the 'MEGA MENU' checkbox is checked and labeled 'Enable'. The 'Navigation Label' is 'Technology' and the 'Title Attribute' is empty. Below this, the 'Original' link is 'Technology'. At the bottom, there are 'Remove' and 'Cancel' links.

After that, every **Category, Tag, Format** type menu elements added under that menu item will be converted to display posts from that item:

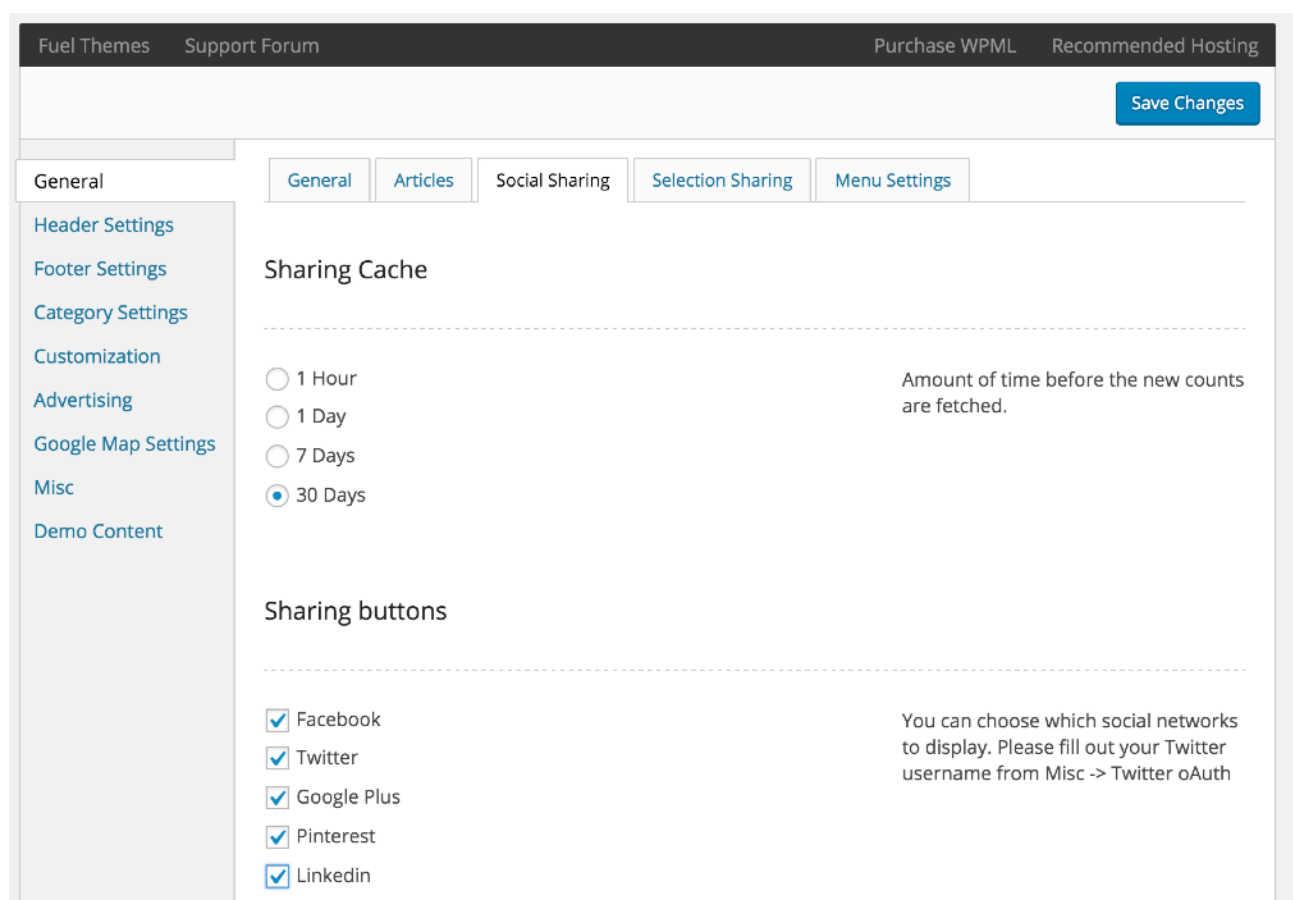

The screenshot shows the 'Categories' sidebar on the left. The main panel displays the 'Technology' category expanded, showing three sub-items: 'Apple', 'Gadgets', and 'Google'. Each sub-item has a 'Category' dropdown menu next to it.

## 8. Social Media Integration

Social media is part of our lives and we love it! Our users love it and it's crucial to display which posts get the most attention on social media. To do that, you'll need the share counts. To select which social media sharing sites you would like to display and get counts from, please go to

**Appearance > Theme Options > General > Social Sharing** and make your selection.

The screenshot shows the 'Social Sharing' settings page. At the top, there's a navigation bar with 'Fuel Themes', 'Support Forum', 'Purchase WPML', and 'Recommended Hosting'. A 'Save Changes' button is in the top right. The left sidebar contains a menu with 'General' (selected), 'Header Settings', 'Footer Settings', 'Category Settings', 'Customization', 'Advertising', 'Google Map Settings', 'Misc', and 'Demo Content'. The main content area has tabs for 'General', 'Articles', 'Social Sharing' (active), 'Selection Sharing', and 'Menu Settings'. Under 'Social Sharing', there are two sections: 'Sharing Cache' and 'Sharing buttons'. 'Sharing Cache' has radio buttons for '1 Hour', '1 Day', '7 Days', and '30 Days' (selected), with a note: 'Amount of time before the new counts are fetched.' 'Sharing buttons' has checkboxes for 'Facebook', 'Twitter', 'Google Plus', 'Pinterest', and 'Linkedin', all of which are checked. A note next to them says: 'You can choose which social networks to display. Please fill out your Twitter username from Misc -> Twitter oAuth'.

## Having trouble with social shares?

- Please try deleting your site transients using: <https://wordpress.org/plugins/transients-manager/>
- Twitter share counts only include the tweets that are sent in the last 7 days.
- If you are using the **Social Counter Widget**, you can check the "Debug" option to see the errors returned from social networks.

## 9. Using Visual Composer to construct your pages

To utilize this theme to the maximum, you need to get acquainted to using Visual Composer.

We have added custom Visual Composer Elements on top of the default ones to create unique layouts. You can find these extra elements under the **by Fuel Themes** tab inside Add Element window:

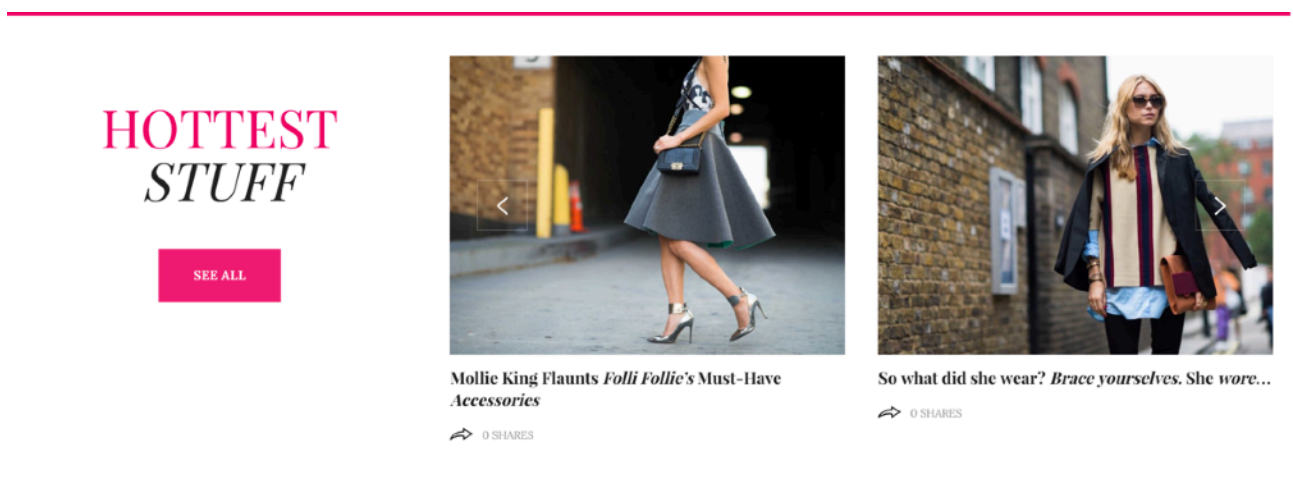

Most of the elements are self-explanatory, but we 'll go over the complex ones to get you started.

# 10. Creating Fixed sidebars using Visual Composer

Before we get started on using fixed sidebars, you need to create additional sidebars to be able to add them to your page. You can do this from **Appearance > Theme Options > Misc > Create Additional Sidebars**.

The logic behind fixed sidebars is that they scroll among the content height, so which ever column you add your **Widgetised Sidebar** element, should have the same height as its sibling columns:

The column containing the sidebar should have the same height as the left column.

To do that, please click on **Edit this row** button on the containing row and select **Equal-height Columns**.

Next step would be click **Edit** on **the Column containing the Widgetised Sidebar** element and check **Enable Fixed Content**.

Column Settings

General

Design Options

Responsive Options

Extra class name

sidebar

Style particular content element differently - add a class name and refer to it in custom CSS.

Enable Fixed Content

☒

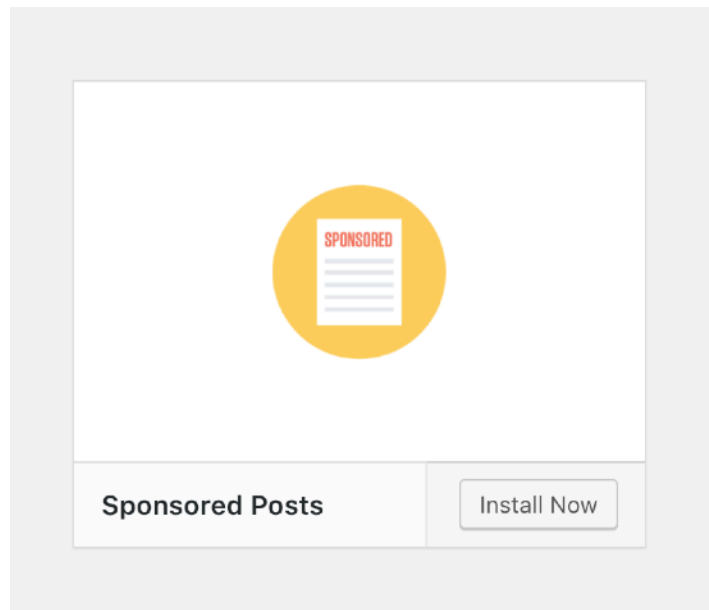

If you enable this, this column will be fixed. You must also enable 'Equal Height Columns' inside parent row settings.

Close

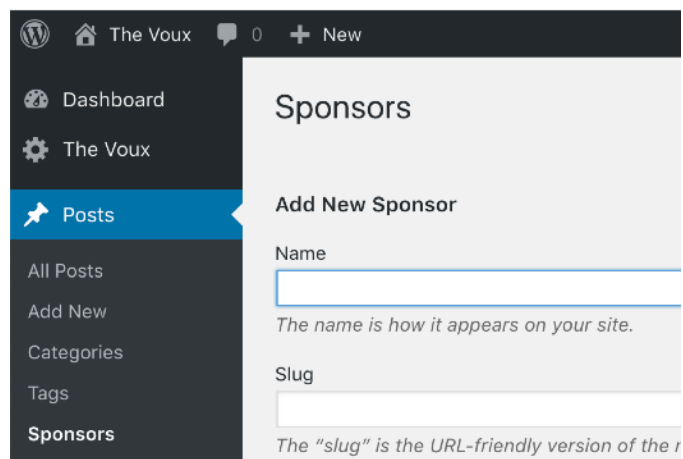

Save changes

# 11. Sponsored Posts

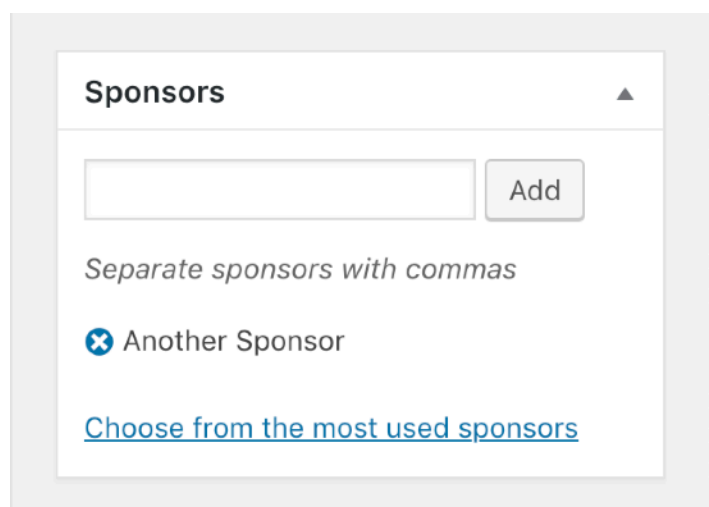

Make sure you have installed Sponsored Posts Plugin from The Voux > Install Plugins:

After that, you can create Sponsors from WP Admin> Posts > Sponsors.

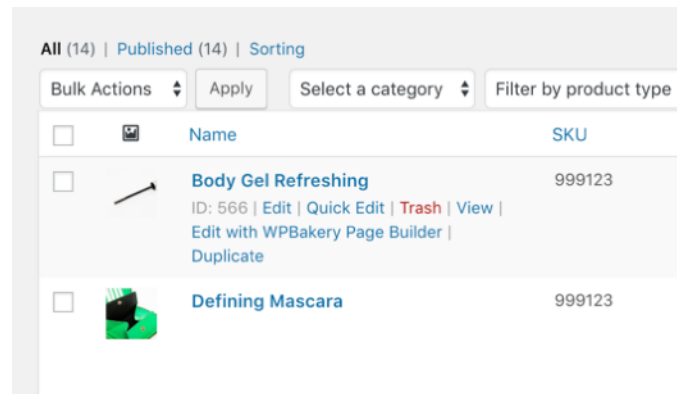

Your created Sponsors will be available inside your Add / Edit Post Screen:

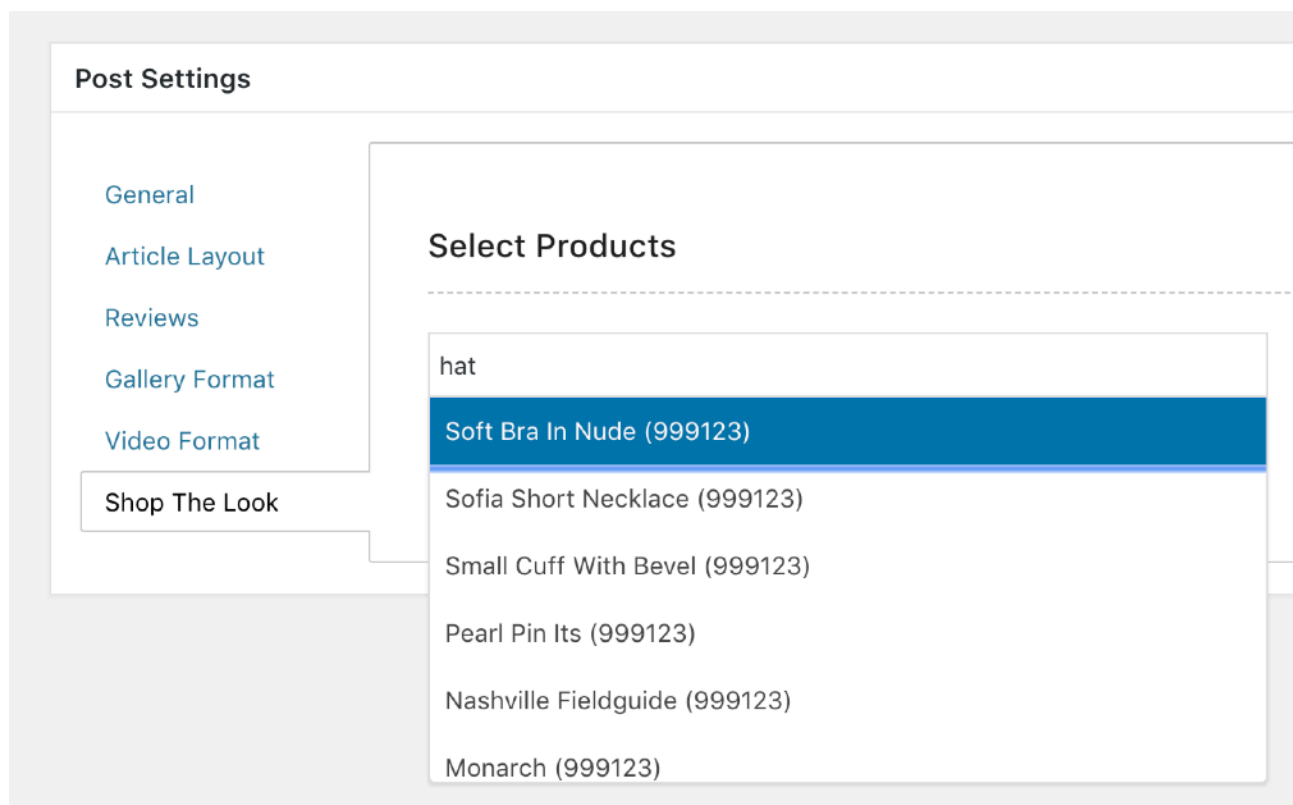

## 12. Shop The Look / Post

Shop The Look feature requires WooCommerce, so make sure you have install WooCommerce plugin from The Voux > Install Plugins.

After that, create some products inside WP Admin > Products

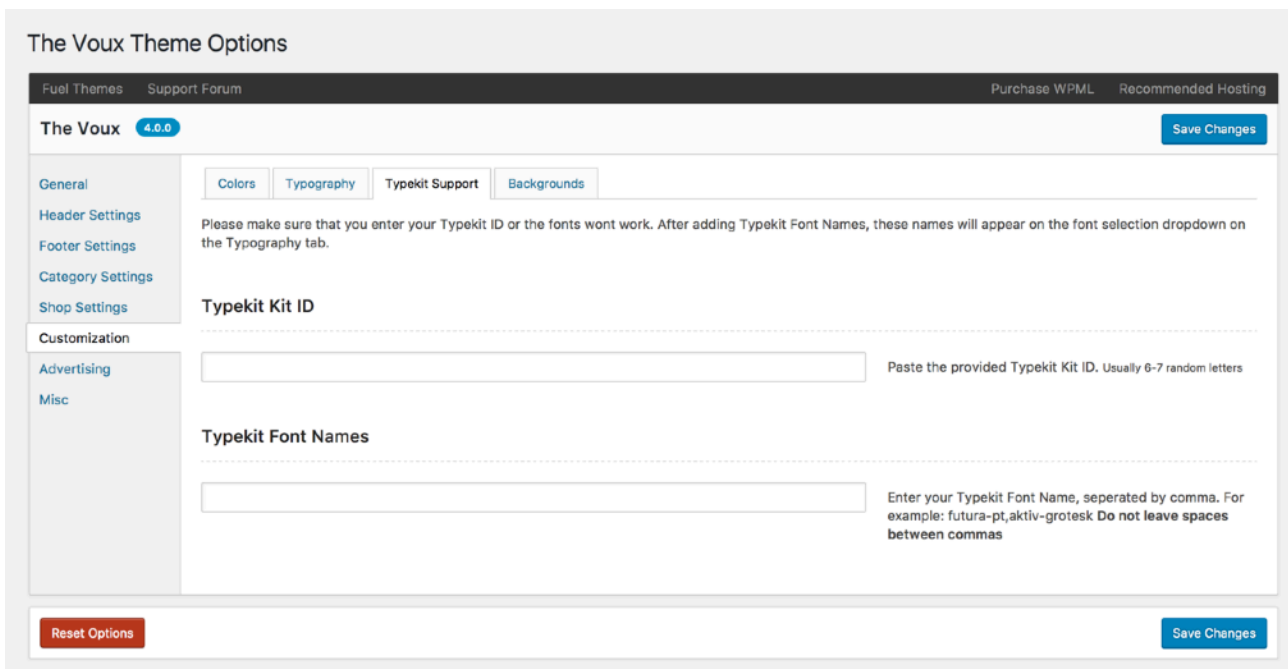

Once that is completed, you can assign them to your posts using the below screen. You can add products by typing their title and select from the Ajax dropdown that is provided:

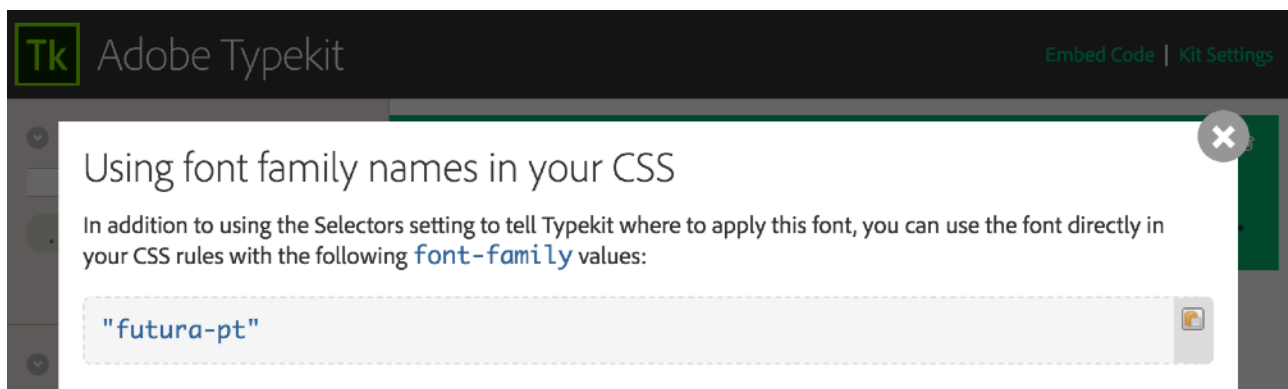

# 13. Typekit Integration

Typekit integration requires that you have a [typekit.com](https://typekit.com) account and have created your own Kits. You can paste your Typekit kit ID inside Theme Options:

The screenshot shows the 'The Voux Theme Options' panel. At the top, there are links for 'Fuel Themes', 'Support Forum', 'Purchase WPML', and 'Recommended Hosting'. The main header says 'The Voux 4.0.0' with a 'Save Changes' button. A sidebar on the left lists various settings categories: General, Header Settings, Footer Settings, Category Settings, Shop Settings, Customization, Advertising, and Misc. The 'Typekit Support' tab is selected. It contains a warning: 'Please make sure that you enter your Typekit ID or the fonts wont work. After adding Typekit Font Names, these names will appear on the font selection dropdown on the Typography tab.' Below this, there are two input fields. The first is labeled 'Typekit Kit ID' and has a placeholder text: 'Paste the provided Typekit Kit ID. Usually 6-7 random letters'. The second is labeled 'Typekit Font Names' and has a placeholder text: 'Enter your Typekit Font Name, seperated by comma. For example: futura-pt,aktiv-grotesk Do not leave spaces between commas'. At the bottom of the panel, there are 'Reset Options' and 'Save Changes' buttons.

Typekit Font Names are given inside your Kit Settings when you click on **Using Fonts in Css:**

## 14. Translating Theme Phrases

This theme is localization ready, which means you can use localization tools to translate your theme. Please use one of the below tools to translate your theme. I personally prefer **Poedit**.

**Pootle:** An open source web-based translation system. The server hosted at Locamotion.org currently has WordPress translation enabled on it.

**Poedit:** An open source program for Windows, Mac OS X and UNIX/Linux which provides an easy-to-use GUI for editing PO files and generate MO files.

**GNU Gettext:** The official Gettext tools package contains command-line tools for creating POTs, manipulating POs, and generating MOs. "For those comfortable with a command shell"

The translation file is located in languages folder (**/inc/languages**). Edit the .po file using POEdit, use the translation field to make replacements.

From the file menu, save file with your language name e.g de\_DE.po. It will generate both a .po and .mo file for your translation.

Next edit wp-config.php located in the root folder of wordpress and define the WPLANG prefix with your language name which should be similar to the translation file name.

You can find more info on editing the wp-config.php and adding the WPLANG prefix here: [http://codex.wordpress.org/Editing\\_wp-config.php#Language\\_and\\_Language\\_Directory](http://codex.wordpress.org/Editing_wp-config.php#Language_and_Language_Directory)

# 15. Multi-Language Support Using WPML

To enable multi-language support, you need to purchase the WPML plugin. What WPML does is gives you the ability to add different translations of your posts, pages & products.

## **Getting started:**

<http://wpml.org/documentation/getting-started-guide/>

## **How to set and translate main features of the theme**

<http://wpml.org/documentation/translating-your-contents/using-the-translation-editor/>

## **Translation Management & Features**

<http://wpml.org/documentation/translating-your-contents/using-the-translation-editor/translation-management-features/>

## **Translating URL slugs**

<http://wpml.org/documentation/getting-started-guide/translating-page-slugs/>

## **How to scan strings coming from the theme / plugin**

<http://wpml.org/documentation/getting-started-guide/theme-localization/>

## **How to translate strings using String Translation**

<http://wpml.org/documentation/getting-started-guide/string-translation/>

## 16. Updating the theme

There are 2 methods to update our wordpress themes to newer version. These new updates are essential if you want to have a bug free website as we give new features and improvements to the theme over time. some of these updates might be needed in order to make the theme compatible with wordpress newer versions. there is no risk on losing your settings and pages. However if you have done modifications on core theme files, then they will be lost, so you should back up those files.

### Update Through Wordpress Admin Panel

- For this method you should first install **Theme Upgrades Tool** (<http://wordpress.org/plugins/easy-theme-and-plugin-upgrades/>)
- Unzip the file you just downloaded from ThemeForest and locate the WordPress Theme. (eg. thevoux-wp.zip)
- Log into your WordPress Dashboard.
- Click on **Appearance > Themes**. Still within the Themes section, on header tab, click on **Add New**, then on header second tab click **Upload Theme**.
- Click **Browse...** and locate the new theme file. (eg. thevoux-wp.zip)
- In the **Upgrade existing theme?** option choose **Yes** from the dropdown list.
- Click **Install Now"**
- Click **Activate**.

## Updating using a FTP software

- Login into your Themeforest account and go to downloads (Dashboard > Downloads)
- Download the theme into your computer
- Install an FTP program (Filezilla is free)
- Retrieve your FTP login information from your hosting admin panel and login into your hosting via FTP
- Unzip the item main file
- Locate **thevoux-wp.zip** and unzip it. make sure your unzipping software do not create extra directory with the same name nested into each other.
- Drag and drop theme main folder into your FTP program with the destination : **YOUR\_HOSTING\_ROOT/YOUR\_SUBDIRECTORY/wp-content/themes/**
- FTP program will give a warning that there is an existing with the same directory name, choose replace all.

Also, remember to clear your browser cache after each update if you notice anything off. Old theme files can persist in your local cache and make you think something's wrong.

## 17. Get Support for your theme

As per Envato rules, you get **6 months of free support** for your WordPress theme.

Support deals with installation of the theme, issues that arise from the usage of any features available by default, **BUG FIXES**, and **SMALL MODIFICATIONS** within one or two lines of code. We do not offer support for installation or administration of WordPress itself, nor do we provide support for any third party plugins, or problems associated with using them in a combination with one of our themes.

### **I have read the documentation and cannot find a solution to my problem**

If you are still having troubles, please email us at support email :  
wpfuelthemes@gmail.com

### **I need Fuel Themes to install & setup the theme for me**

Please check out our [Professional Installation Service on Envato Studio](#)

### **I need complex customizations**

Please fill out the customization form on our website: <https://www.rbinfosoft.com/contact-us/>

We also partnered up with [WP Curve](#) for customers who need a professional regularly monitoring their WordPress website.

### **What is your recommended hosting for a hassle-free, fast website?**

WP Engine is absolutely phenomenal. They have the best support and our demos are hosted on their platform since we started. [Get 2 months free hosting with WP Engine on any shared annual plan](#)
